Employment and Unemployment Survey 2014 Annual Report

Household Surveys Directorate

April 2015

THE HASHEMITE KINGDOM OF JORDAN

**Employment and Unemployment
Survey 2014
Annual Report**

**Household Surveys Directorate
April 2015**

Preface

The Department of Statistics (DoS) takes the pleasure in presenting the Annual Report of the Employment and Unemployment Surveys (EUS) carried out during February, May, August and November 2014. The main findings of the four rounds were merged together to reflect annual indicators for the year 2014. These rounds covered, altogether, a sample of about 53 thousand households Nation-wide representing the Kingdom, governorates, regions and urban/rural. Based on the frame provided by the results of the Population and Housing Census 2004.

This report includes the survey methodology as well as the detailed tabulations of the results related to the topics covered in the survey. These include the demographic, social and economic characteristics of the population with particular emphasis on the labor force in order to identify the economic activity status of the survey's population, as well as the unemployment levels and rates in the Jordanian labor market. This is in addition to measuring the unemployment rates according to governorate, educational level, marital status and age.

The DoS would like to express its thanks and gratitude to the sample households, whose cooperation with the DoS staff brought this survey to success. The DoS also would like to thank all those from its staff and outsiders whose contribution to the survey is highly valued.

The DoS hopes that the data in this report will be useful to those interested in policy formulation and decision making in the labor market in general, and in the area of employment and unemployment in particular, at both the public and private levels.

Dr. Qasem AL Zou'bi
Director General

Main Findings

1. Age Structure

The Jordanian society is still young, where the population of less than 15 years old constituted 34.6% of the total surveyed population compared to about 51% in 1979. The main reason for this decrease has resulted from the continuous decrease of the fertility rates in Jordan. The percentage of population aged 60 years and above increased from 4.1% in 1979 to 7.4% of the total population.

2. Education

The illiteracy rate reached 6.7% for the population aged 15 years and above. There was a difference between males and females (9.8% for females and 3.7% for males). In regard to the educational level, 39.6% of the population at the same age group completed the secondary education and above with minor differences between males and females.

3. Labor Force

- a. The Jordanian labor force amounted to 36.4% of the total population aged 15 years and over.
- b. The results show that there is a significant difference in the characteristics of the labor force between males and females in terms of the educational level, whereas 57.9% of the total male labor force was with less than secondary compared to 11.5% for females. While 62.8% of the total female labor force was with bachelor degree and above compared to 20.7% for males.
- c. 49.5% of the Jordanian labor force was concentrated in the age group 25-39 (47.4% for males against 59.6% for females) and 31.2% was concentrated in the age of 40 years and above.

4. Economic Participation

- a. The crude economic participation rate amounted to (23.8%) and this percentage is low (it was 38.7% for males compared to 8.3% for females).
- b. The refined economic participation rate (labor force divided by the population 15 years old and above) was (36.4%) for total, and 59.7% for males compared to 12.6% for females. It is observed that the Jordanian woman participation in the labor market is still low compared with her peers in developed countries, which mostly exceeds 35.0%.
- c. The refined activity rate varied among governorates and reached 43.1% for Karak Governorate and 34.5% for Zarqa Governorate. High rate has been observed for males particularly in Karak Governorate reaching 63.9%, while it was 7.3% for females in Zarqa Governorate compared to (10.4%) in Aqaba Governorates.
- d. The refined economic participation rate varied by educational level and reached 68.5% for those with bachelor degree and above (81.8% for males compared to 54.4% for females), while reached its minimum value 5.0% among illiterates.

- e. It is noticed that female specific economic participation rates were high for age groups 20-24 and 25-39 years (16.4% and 23.0% respectively), while these rates were high for males in the age groups 25-39 and 40-54 (92.7% and 74.2% respectively).

5. Employed Population

- a. The employee rate amounted to (32.1%) of the total population aged 15 years and over.
- b. The majority of employed persons (79.5%) is concentrated in the age group 25-54, (78.0% for males and 87.7% for females).
- c. (50.8%) of the employed persons were with less than secondary, while about 12.0% and 36.2% were with secondary and above secondary respectively.
- d. Around one third of the employed males were engaged in service and Sales workers and 16.8% in crafts and related trades. As for the employed females, 60.0% and 13.5% were engaged in two occupations, professionals and technicians and associate professionals respectively.
- e. 26.2% and 15.3% of the total employed persons were working in public administration, civil defense and social security, and in wholesale and retail trade respectively, (28.4% and 17.1% for males). As for females, about two fifth of those employed were working in education and 15.3% were working in health and social work sector.
- f. Four fifth of the total employed persons are paid employees (84.1% for males against 96.3% for females).

6. Unemployed Population

- a. The unemployment rate for the Jordanian labor force amounted to 11.9% compared to 12.6% in 2013. This rate varied between males and females, it reached 10.1% for males as compared to 20.7% for females.
- b. At the governorate level, the rate varied ranging from 10.2% for Zarqa Governorate to 15.4% for Tafiela and Ma`an Governorate. Significant differences between males and females at governorate level were also observed.
- c. The rate increased evidently among the labor force with bachelor degree and above and amounted to 17.3% (11.7% for males against 26.4% for females).
- d. The rate was high on the age groups 15-19 and 20-24 and amounted to 36.1% and 29.3% respectively.
- e. More than three quarters of the unemployed (79.8%) were concentrated in the age group 20-39 years, while those aged 55 years and above represent only 0.7%.
- f. 43.7% of the unemployed were with less than secondary (60.5% for males against 4.2% for females), while 80.0% of the unemployed females were with bachelor degree and above.
- g. For the Unemployment period the results showed that 37.9% have been unemployed for more than one year, while 38.0% have been unemployed for six months or less and 24.1% for seven months up to one year.

7. Quarterly and Annual Indicators

Table A shows the basic quarterly and annual indicators of the survey by sex for 2014,

Table A: Basic Quarterly and Annual Indicators by Sex (EUS 2014)

Indicator and Sex	Quarter 1 February 2014	Quarter 2 May 2014	Quarter 3 August 2014	Quarter 4 November 2014	Annual Indicators

1. General Background of the survey

1.1 Introduction

The Department of Statistics (DoS) carried out four rounds of the 2014 Employment and Unemployment Survey (EUS) during February, May, August and November 2014. The survey rounds covered a total sample of about fifty three thousand households Nation-wide. The sampled households were selected according to scientific bases, using a stratified multi-stage cluster sampling design. This report contains the main findings of the four rounds after being merged together to represent annual indicators for the year 2014. It also includes a description of the methodology implemented in the four rounds of the survey as well as the tabulations of the survey's main findings, grouped in 10 categories.

It is worthy to mention that DoS using a (PDA) technology in collecting and processing data.

1.2 Objectives of the Survey

- a. Identify the demographic, social and economic characteristics of the population and manpower.
- b. Identify the occupational structure and economic activity of the employed persons, as well as their employment status.
- c. Identify the reasons for the desire of the employed persons to search for a new or additional job.
- d. Measure the economic activity participation rates (The number of economically active population divided by the population of 15+ years old).
- e. Identify the different characteristics of the unemployed.
- f. Measure unemployment rates (the number of unemployed persons divided by the number of economically active population of 15+ years old) according to the various characteristics of the unemployed, and the changes that might take place in this regard.
- g. Identify the most important ways and means used by the unemployed person to get a job, in addition to measuring durations of unemployment for such persons.
- h. Identify the changes overtime that might take place regarding the above mentioned variables.

1.3 Survey Frame

The sample of this survey is based on the frame provided by the data of the Population and Housing Census, 2004. The Kingdom was divided into strata, where each city with a population of 100,000 persons or more was considered as a large city. The total number of these cities is 6. Each governorate (except for the 6 large cities) was divided into rural and urban areas. The rest of the urban areas in each governorate was considered as an independent stratum. The same was applied to rural areas where it was considered as an independent stratum. The total number of strata was 30.

In view of the existing significant variation in the socio-economic characteristics in large cities in particular and in the urban in general, each stratum of the large cities and the urban strata was divided into four sub-stratum according to the socio- economic characteristics provided by the population and housing census with the purpose of providing homogeneous strata.

The frame excludes the population living in remote areas (most of whom are nomads), In addition to that, the frame does not include collective dwellings, such as hotels, hospitals, work camps, prisons, and the like.

1.4 Survey Sample

1.4.1 Sample Design

The sample of this survey was designed, using the two-stage cluster stratified sampling method. The main sample was designed in 2009 based on the data of the population and housing census 2004 for carrying out household surveys. The sample representative on the Kingdom, rural, urban, regions and governorates levels. The total sample size for each round was 1336 PSUs (clusters). These units were distributed to governorates urban, rural and large cities in each governorate according to the weight of persons and households and according to the variance within each stratum. Slight modifications regarding the number of these units were made to cope with the multiple of 8, the number of clusters for four rounds was 5343.

The main sample is consisted of 40 replicats, each replicat is consisted of 167 Primary Sampling Units (PSUs). For the purpose of each round, eight replicats of the main sample were used. The Primary Sampling Units (PSUs) were ordered within each stratum according to geographic characteristics and then according to socio-economic characteristics in order to ensure good spread of the sample. Then, the sample was selected on two stages, in the first stage, The Primary Sampling Units (PSUs) were selected, using the Probability Proportionate to Size with systematic selection procedure. The number of households, in each primary sampling unit (cluster) served as its weight or size. In the second stage, the blocks of the primary sampling units (cluster) which were selected in the first stage have been updated. Then a constant number of households (10 households) was selected, using the random systematic sampling method as final PSUs from each PSU (cluster).

Table D below shows the distribution of the number of PSUs, number of households to be visited by regions, governorates.

Table D: Sample Size and Distribution by Region and Governorate (EUS 2014)

Region / Governorate	No. of PSUs	No. of unweighted Households	
		No.	%
Central Region	2879	28790	54.0
Amman	1504	15040	28.2
Balqa	415	4150	7.8

Ajloun	192	1920	3.6
South Region	764	7640	14.3
Karak	320	3200	6.0
Tafiela	156	1560	2.9
Ma'an	160	1600	3.0
Aqaba	128	1280	2.4
Total	5335	53350	100.0

1.4.2 Sample Coverage

The results of the fieldwork indicated that all sample households were visited (Table E). The number of successfully completed interviews was 48436, that is 90.8 percent of the total sample households. Among the reasons of un-successful interviews (although three callbacks were made) 1.8 percent of the dwellings were closed at time of the visit.

The findings in Table (E) also indicate that the response rate is 95.5 percent, based on dividing the number of completed questionnaires by the number of expected completed interviews, that is after excluding the vacant dwellings.

Table E: Distribution of Interviews by Region, Governorate and Visit Results(EUS 2014)

Region / Governorate	Completed	Closed	No Eligible Respondent	Vacant	Refused	Other	Total no. of Questionnaires
Central Region	26288	290	3	1337	774	98	28790

Total	48436	982	6	2632	1126	168	53350

Sampling errors were calculated for the Refined Activity Rate as well as the Unemployment Rate according to a set of relevant variables (See Appendix 5.1).

It is noteworthy that the sample of the present survey does not represent the non-Jordanian population, due to the fact that it is based on households living in conventional dwellings. In other words, it does not cover the collective households living in collective dwellings. Therefore, the non-Jordanian households covered in the present survey are either private households or collective households living in conventional dwellings. In Jordan, it is well known that a large number of non-Jordanian workers live as groups and spend most of their time at work places. Hence, it is more unlikely to find them at their residences during daytime (i.e. the time when the data of the survey is collected). Furthermore, most of them live in their work places, such as: workshops, sales stores, guard places, or under construction building's sites. Such places are not classified as occupied dwellings for household sampling purposes. For that the coverage of such population would not be complete in household surveys. Consequently, the published data is for Jordanian only.

1.5 Definitions and Classifications

The definitions and classifications used in the 2014 EUS were prepared according to the international standards issued by the United Nations and some of its specialized agencies. Few modifications were made to suit the local conditions in Jordan. Following are the most important definitions used in the survey.

Urban and Rural: For the purposes of the present survey, each locality with 5000 persons or more, according to the results as revealed by the 2004 Population and Housing Census, was considered “urban”. The remaining localities were considered “rural”.

Private Household: A private household consists of one person or more occupying a separate housing unit or part of it. It has a head. The household members participate in expenditures from the income of the household head and /or some of its members. Some of the household members may not be related to each other. It is customary that the members share all or some meals.

Household Head: A household head is a usual member of the household living in Jordan (according to the above definition of the household), who is recognised as such by other household members. He is usually responsible for living arrangements and decision taking regarding household affairs. He may be a male or a female, provided that he/she is not less than 15 years old.

Age In Complete Years : It refers to the estimated or calculated period of time between the date of birth and the date of interview, expressed in complete years regardless of the fractions of the year.

Nationality: It is the legal affiliation of a person to a certain country, which is usually determined by the passport he holds or he has the right to hold.

School Enrollment: This concept denotes to any person aged 15 years and above who is now or was ever enrolled in a governmental or private educational institution inside or outside Jordan, regularly in the aim of obtaining an educational qualification or a degree, provided that the duration of study in such an institution is not less than one year. For example, students enrolled in basic education (grades 1-10), secondary education, community colleges and universities.

School Years Successfully Completed: The number of school years successfully completed by an individual, years of failure or repetition are excluded.

Educational Status: The educational status of a person aged 15 years and over at the time of interview, is defined as follows:

Without Qualification

Illiterate: A person who can not both read and write a simple description about himself in any language.

Person who can read and write: A person who can read and write in any language but does not have an educational qualification.

With Qualification

It is the highest educational stage successfully completed by a person at the time of interview. It may be one of the following stages:

- | | |
|-------------------------------|--------------------------|
| (1) Elementary | (6) Intermediate diploma |
| (2) Preparatory | (7) B.A., B.Sc. |
| (3) Basic education | (8) Higher diploma |
| (4) Vocational apprenticeship | (9) M.A. |
| (5) Secondary | (10) Ph.D. |

Educational Specialization: It is the field of study in which the person has successfully obtained his highest educational qualification. For example:

Persons with secondary qualification in one of the following streams: literary, scientific, commercial, postal, hotels, nursing, and the like.

Persons with intermediate diploma in the field of:

- | | |
|-----------------------|------------------------|
| (1) Physical training | (4) Applied statistics |
| (2) History | (5) Accounting |
| (3) Music | (6) Postal studies |
| Etc.... | |

Persons with B.A. or B.Sc. or higher in the field of:

- | | |
|----------------|----------------------------|
| (1) History | (7) Cardiology |
| (2) Archeology | (8) Electrical engineering |
| (3) Philosophy | (9) Industrial engineering |
| (4) Economics | (10) Pediatrics |
| (5) Accounting | (11) Agriculture |
| (6) Dentistry | (12) Public administration |
| Etc.... | . |

Marital Status: The civil status of a person aged 15 years and above at time of interview. It may be one of the following cases:

Never Married: A person of 15 years old and above who has never been married according to the social norms and customs (i.e. not actually married).

Married: A person of 15 years old and above engaged in actual marriage according to social norms and customs, regardless of whether the couples were living together or not at time of interview.

Divorced: A person of 15 years old and above whose actual marriage was legally dissolved by divorce and was not remarried at time of interview.

Widowed: A person of 15 years and above whose last actual marriage was dissolved by death of spouse and was not remarried at time of interview.

Separated: A person of 15 years old and above who has been actually ever married but living away from the spouse (e.g. due to dispute) without occurrence of divorce or death.

Economic Activity Status: This refers to the relationship of any household member (15+ years) with an economic activity during the seven days prior to the date of interview (the reference period). This status may be one of the following:

Employed: Any person of 15+ years of age who works for the public sector or the private sector, provided that he worked at least one hour during the reference period. This category includes the following cases:

Paid Employee: Any person of 15+ years of age who works for the public sector or the private sector and receives monthly salary, or weekly or daily wages, and the like, provided that he should have worked at least one hour during the reference period. This category includes those joining a job or a job attachment even if they did not practise the job during the reference period due to temporary illness, or leave, or bad weather ...etc.

Employed in an entirely owned business: Any person of 15+ years of age who, during the reference period, worked in a business entirely owned by him/her. He might be a trades person with no business place, such as: painter, white washer, builder...etc.

Employed in a partially owned business: Any person of 15+ years of age who, during the reference period, worked in a business partially owned by him/her.

Unpaid family-owned business worker: Any person of 15+ years of age who, during the reference period, worked without payment in a business owned by the family or any of its members.

Other Workers: Any person of 15+ years of age who worked, during the reference period, in any work not elsewhere classified.

Unemployed: Any person of 15+ years of age, who is without work or job, able to work, available for work and is looking for work. The person is considered “unemployed” if he satisfies the following criteria:

- a. Does not practice any work (i.e. is without work or job). In other words, he has not worked for one hour or more during the reference period and was not temporarily absent from work.

- b. Is available for work, that is, he is ready or prepared to receive work immediately whether during 7 days prior to the date of interview, or within 15 days following the date of interview.
- c. Is searching for work, i.e. he has taken specific steps and spent some of the time or all the time in search for work in a period close to the four weeks prior to the date of interview. These steps may include: registration and applying directly to the employers; searching for work at certain workers' gatherings or assembly places; placing or answering advertisements in newspapers; seeking assistance of friends or relatives, ...etc.
- d. The person who is currently available for work, but did not search for work during the four weeks prior to the date of interview because he is waiting to return to his previous job or has found a job which he will join later on.

Unemployed persons are two types:

Unemployed ever worked: Any person of 15+ years of age who did not practise any work or job during the week prior to the date of interview, but he is able to work, available for work, looking for work, and has ever worked whether inside or outside Jordan.

Unemployed never worked: Any person of 15+ years of age who did not practise any work or job, but he is able to work, available for work, seeking work for the first time during the four weeks prior to the date of interview , and has never worked inside or outside Jordan.

Student: Any person of 15+ years of age, who is neither employed nor unemployed (i.e. not economically active), and who attends a school regularly or irregularly for the purpose of obtaining an educational qualification.

Housemaker: Any person of 15+ years of age who is not economically active and not attending school regularly, who is engaged in household duties or supervises those who perform such duties. Paid housemaids, baby setters, and the like are not included in this category.

With Means (income recipient): Any person of 15+ years of age, not economically active, not attending school and not engaged in household duties, but receives income from shares, royalties, pensions, or from any public or private aids or subsidies.

Disabled: Any person of 15+ years of Age, not economically active, not attending school, not engaged in household duties, not income recipient and unable to work due to old age, physical or mental handicap, or chronic disease.

Others: Any person not elsewhere classified.

Actual Hours of Work: The number of actually worked hours by a worker during the seven days prior to the date of interview. This number is the sum of the following:

- a. Hours actually worked during normal periods of work.
- b. Overtime hours.

- c. The time that the worker spends at the work place in preparing, maintaining, and cleaning of work tools and equipment, or in preparing receipts, time sheets, and reports...etc.
- d. The time that the worker spends at the work place waiting or standing by for the provision of work materials, or the repair of mechanical or electrical damages or break downs...etc.
- e. The short breaks or rest periods that the worker spends at the work place to have tea, coffee, or soft drinks.

Actual work hours do not include the following:

- a. Hours paid for but not worked such as: paid annual vacations, paid official or public holidays, and paid sick leaves.
- b. Time designated for meal breaks, which normally does not exceed three hours; and
- c. Time spent on travel from home to work place, and vice versa.

Underemployment: This refers to the employed persons of 15+ years of age who desire to obtain a new or additional job, and are available for work during the reference period. Such persons should meet the following criteria:

- a. Current work is insufficient in terms of salary or incentives.
- b. Current work does not suit the educational qualification.
- c. The hours spent in current work are short.

Name of Establishment Where the Person Works: The name of a ministry, department, company, store, ...etc. in which the person is currently working.

Current Economic Activity: Type of the major product/ service produced by the establishment for which the person is working. For those not engaged in establishments, their economic activity is identified and recorded according to the specifications of their major occupations.

The economic activity should be clearly specified in terms of goods and services produced by the establishment, whether for marketing exchange or private consumption purposes. For example, distinction should be made whether the economic activity was wholesale or retail trade; commodity or passenger transportation by land, sea, or air; or animal breeding, wheat production or fruit trees cultivation...etc.

Distinction should also be made regarding the type of activity of certain government departments, such as: the ministries of Education, Agriculture, Health, Transportation ...etc. For example the economic activity of those working at schools belongs to the education sector, whereas for the officials at the headquarters of the Ministry of Education belongs to the public administration sector. Likewise, the economic activity for those working at the headquarters of the Ministry of Health belongs to the public administration sector, while for those working at hospitals, health centers and clinics, belongs to the health sector.

Current Occupation: It refers to the kind of work practised by the employed person during the seven days prior to the date of interview. For example, gynaecologist, general practitioner, dentist, garbage collector, basic education teacher...etc.

Current Employment Status: It denotes to the position of the employed person while practising his work. It may be one of the following:

Paid Employee: Any person working for another person or establishment and receives any kind of payments (in cash or in kind) whether it was monthly, weekly, daily, commission, piece- rate, ...etc.

Employer: Any person working in an establishment owned entirely or partially by him/her and hires one or more paid employees.

Own-account Worker: Any person working in an establishment owned entirely or partially by him/her, or practises a job or trade and hires no paid employees.

Unpaid Family Worker: Any person working for his family or one of its members, provided that he/she does not receive any kind of payment, even if he/she receives some sort of remuneration.

Unpaid Worker: Any person working for a person(s) other than a family member or establishment, and does not receive any kind of payments, even if he received some sort of remuneration, such as apprentices or trainees.

Monthly Income from Employment: The amount of money and other in kind benefits received by a person from his work during the calendar month prior to the interview. It may be one of the following:

Income from Employment: The salary or wage received by a person whether he was a regular or temporary worker or trainee in return for work he performs for others. This payment may be in cash or in kind. It includes any overtime allowances or remunerations, whether in cash or in kind. In case the person was working for more than one party, the total income from all sources should be recorded. The in kind payment includes the market value of clothes, meals, transportation, housing, ...etc. offered by the employer.

Income of Own-account Worker: It is the cash or in kind revenue that the person obtains from his work whether he/she is an employer or own-account worker, regardless of industry.

Duration of Search for Work: There are two types of duration:

For those unemployed, available for work and searching for work: It means the period of time (in months and years) spent by the job seeker from the beginning of his search for work up to the date of interview.

For those unemployed, available for work but not searching for work: It is the period of time that elapsed up to the date of interview where the person is awaiting to return to his previous job or to join a job in the near future.

2. The Preparatory Stage

This stage included a variety of overlapping operations to prepare a work plan and timetable, timely recruitment and training of the survey staff, and distribution of tasks and work areas. This stage also included the preparation of concepts and definitions; finalizations of documents such as the questionnaires, instruction manuals and other related forms; preparation of a system for manual data processing, including the editing and coding systems and manuals; preparation of electronic execution programs and implementation procedures regarding data, verification and debugging for cross-tabulation purposes.

The supervisory and executive levels of survey staff were selected according to their past experience in censuses and surveys, familiarity with geographic areas, and educational qualification. It is noteworthy that all survey staff were university graduates.

A classroom-training program for the survey staff was held in the survey headquarters for each round. The program focused on survey objectives, data collection procedures, confidentiality of data, and how to deal with households and overcome difficulties. The program also included a detailed explanation of the questionnaire inputs, concepts and instructions related to data collection and field editing.

In addition to the above training, further classroom and field practices demonstrated how to fill in the questionnaire. Errors emerging from these applications were detected and explained to the field staff.

3. Field Work Stage

The sample households were visited and relevant data were collected during February, May, August, and November 2014. The fieldwork was organized in a way that ensured complete control, accuracy and consistency of field logistics to obtain high quality data.

The completed questionnaires were edited daily in the field for completeness and consistency and to make sure that all sample households have been visited.

4. Data Processing Stage

A tabulation results plan has been set based on the previous Employment and Unemployment Surveys while the required programs were prepared and tested.

When all prior data processing steps were completed, the actual survey results were tabulated using an ORACLE package. The tabulations were then thoroughly checked for consistency of data. The final report was then prepared, containing detailed tabulations as well as the methodology of the survey.
