Acknowledgment

The success of the Palestinian Labour Force survey program would not be possible without enthusiastic cooperation and support from households selected in the successive round of the survey sample.

This Palestinian Labour Force Survey program (PLFS) is supported by a generous grant from the Government of Switzerland through the Swiss Development Cooperation (SDC).

The Palestinian Central Bureau of Statistics (PCBS) wishes to Ms. Anick Tonti from the SDC and Mr. Farhard Mehran from the ILO for their help in making the PLFS a reality.

Note for Users Note for Users

1. Persons who work in Israel and were absent from work due to Israeli closure are considered unemployed, and also those persons never work and not looking for work but waiting to return back to their works in Israel and Settlements.
2. The Palestinian Territory were diversified into a group of administrative parts, for dissemination purposes, grouping of districts to Governorates and Governorates to another as follows: Jenin & Tubas districts, Tulkarm & Qalqiliya, Nablus & Salfit districts, Bethlehem & Jericho, no change on other Governorates.
3. A comprehensive revision for the sample weights has been made, using the most recent population estimates, and the demographic structure of the population; distribution by age and sex, in addition to distribution according to place of residence.
4. (-) in tables means observations are too small.

Preface

The Palestinian Central Bureau of Statistics is pleased to present the fifth annual report on the Palestinian Labour Force Survey Programme. This programme consists of an integrated series of labour force surveys, the first one issued in October 1995. The Palestinian Labour Force Survey Programme conducts surveys quarterly.

The main objective of collecting data on the Palestinian labour force including components of employment, unemployment and underemployment, is to provide basic information on the relative size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in employment. These data supported with information on other aspects of the economy provide a basis for the evaluation and analysis of macro-economic policies.

This report provides data on labour force, covering standard classifications, economic activity, occupation, employment status, and other related variables, as well as the demographic characteristics of the work force (population aged 15 years and above).

We hope that this report will provide Palestinian planners, researchers and decision makers with revised and accurate statistical data on the Palestinian labour market.

July, 2001

Chapter One

Introduction

1-1 Survey Objectives:

The main objective of collecting data on the labour force and its components, including employment, unemployment and underemployment, is to provide basic information on the size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in the employment situation. These data, supported with information on other aspects of the economy, provide a basis for the evaluation and analysis of macro-economic policies.

1-2 Report Structure:

This report consists of five chapters. The first chapter presents a background on the labour force survey programme and survey objectives. The second chapter presents the main definitions used in developing the questionnaire and other research tools, in addition to data collection and tabulation. The third chapter presents the main findings: labour force key indicators, main characteristics of the employed, unemployed, underemployed and persons outside labour force, labour force according to level of education, distribution of the employed population by occupation, Economic Activity, place of work, employment status, hours and days worked and average daily wage in NIS for the employees.

The fourth chapter discusses the methodology used in the survey, including questionnaire design, sampling frame, sample design and sample weights calculations. This chapter also describes the recruitment and training of interviewers and supervisors, fieldwork operations, data processing, coding and editing after data entry and tabulation.

The fifth chapter includes a descriptive assessment of data quality, including non-response rate and its components.

Chapter Two

Concepts and Definitions

This chapter presents the main concepts and definitions used in the survey. These concepts are based on the international standards taking into account the Palestinian labour market's circumstances.

Household:

One person or a group of persons living together who make common provision for food or other essentials for living. Household members may be related, unrelated, or combination of both.

Population of working age:

All persons in the West Bank and Gaza Strip aged 15 years and over.

Reference week:

The week ending on Friday preceding the interviewer's visit to the household.

Work:

Includes any activity for wage or salary, for profit or family gain, in cash or in kind. One hour or more of such activity constitutes work. Work also includes unpaid activity on a family farm or business.

Employed:

All persons are 10 years and over who were at work at least one hour during the reference week, or who were not at work during the reference week, but held a job or owned business from which they were temporarily absent (because of illness, vacation, temporarily stoppage, or any other reason). Employed persons are classified according to employment status as follows:

1. Employer:

A person who operates his or her own economic enterprise or engages independently in a profession or trade, and hires one or more wage employees.

2. Own-account worker (self-employed):

A person who operates his or her own economic enterprise or engages independently in a profession or trade, and hires no employees.

3. Employee:

A person who works for a public or private employer and receives remuneration in wage, salary, commission, tips, piece-rates or pay in kind.

4. Unpaid family member:

A person who works without pay in an economic enterprise operated by a related person living in the same household.

Unemployed:

Unemployed persons are those individuals 10 years and over who did not work at all during the reference week, who were not absent from a job and were available for work and actively seeking a job during the reference week. Persons who worked in Israel or were absent from work due to closure are considered unemployed, and also those persons never work and not looking for work but waiting to return back to their works in Israel and Settlements.

Labour force:

The economically active population (Labour Force) consists of all persons 15 years and over who are either employed or unemployed as defined over at the time of survey.

Underemployment:

Underemployment exists when a person's employment is inadequate in relation to alternative employment, account being taken of his/her occupational skills. The underemployed persons are classified into two groups:

1. Visible underemployment:

Visible underemployment refers to insufficient volume of employment:

persons worked less than 35 hours during the reference week or worked less than the normal hours of work in their occupation were considered as visibly underemployed.

2. Invisible underemployment:

Invisible underemployment refers to a misapplication of labour resources or fundamental imbalance as between labour and other factors of production, such as insufficient income, underutilization, or bad conditions of the current work, or other economic reasons. In this survey, employed persons are classified as invisibly underemployed if they are not already classified as visibly underemployed; and want to change their jobs because of an insufficiency of income, or because they are working in an occupation which does not correspond to their qualification.

Main job:

The job at which the person usually works the most hours in his/her main job. If a person usually works the same number of hours at two jobs, the "main" job is the job at which the person has been employed the longest.

Full time job:

Any job that is usually performed for 35 hours or more per week is considered full-time. In some occupations, usual weekly schedules of less than 35 hours per week are considered to be full-time. For these cases, the option "normal hours are full time" is provided.

Part time job:

A job in which a person works less than 35 hours, unless the number of usual work hours is less than 35. In addition, a job is a part time job if the hours worked by a person were less than usual work hours in such job.

Occupation:

Occupation refers to the kind of work done during the reference period by the employed person, or the kind of work done previously if unemployed, irrespective of the Economic Activity or the employment status of the person. Occupations are grouped together mainly on the basis of the similarity of skills required to fulfill the tasks and duties of the job. Occupations are classified according to the International Standard Classification of Occupation (ISCO 1988).

Economic Activity:

Economic Activity refers to the activity of the establishment in which an employed person worked during the reference period, or last worked if unemployed. This activity is defined in terms of the kind of goods produced or services supplied by the unit in which the person works. Economic Activity activities are classified according to the unified commodity

classification in the West Bank and Gaza Strip which is based on the International Standard Classification of All Economic Activities (ISIC Rev3).

Absent from usual work:

All those who were absent from their usual work during the reference week, due to illness, holiday, strike, curfew, lock-out, temporary work stoppage, or due to some other reasons.

Seeking work:

Seeking work is defined as having taken specific steps in the reference week to find paid employment or self-employment. Job seekers are classified into:

1. Available for work: A person ready to work if he\she is offered any job, and there is no reason preventing him\her from accepting such a job although he\she did nothing to get a job.
2. Actively seeking work: A person who is willing to work and is actively seeking work through reading newspaper advertisement, asking friends, registration at the labour exchange offices, or asking employers.

Persons outside labour force:

The population not economically active comprises all persons 15 years and over, who were neither employed nor unemployed accordingly to the definitions over.

Years of schooling:

The number of regular years of study completed successfully. Repetition years and irregular study or courses are not taken into account.

Hours worked:

Total number of hours actually worked during the reference period as well as overtime and time spent at the place of work on activities such as preparation of the workplace. Leaves, meal breaks and time spent on travel from home to work and vice versa are excluded from work hours.

Monthly work days:

Number of days at work during the month, excluding week-ends, holidays, sick and other paid or unpaid leaves. One hour of work in a given day is considered as one work-day, thus the half-day work on Thursdays, customary in Palestinian civil services, is accounted for as one a work-day in this survey.

Daily wage:

Cash net wage paid to the wage employee from the employer. Wages received in different currencies are converted into New Israeli Shiekles according to the exchange rate in the survey period

Chapter Three

Main Findings

This chapter presents the main findings of the of labour force survey rounds in the Palestinian Territory. The results are based on four survey rounds conducted during 2000. These indicators reveal the most important characteristics of the Palestinian labour force and its components: employment, underemployment, and unemployment.

Also this chapter provides, the classical distribution of employed persons by industry, occupation, employment status and place of work.

The distribution of unemployed persons is classified by sex and years of schooling.

3-1 Labour Force Participation:

The results indicated that the labour force participation rate was 41.5 percent in 2000, while it was 41.6 percent in 1999. The males participation rate reached 70.1 percent in 2000 compared to 70.7 percent in 1999. On the other hand, the females participation rate increased from 12.3 percent in 1999 to 12.7 percent in 2000.

As well, results reveal that the labour force participation rate for the age group 25-34 years was 54.4 percent; 90.0 percent for males and 17.5 percent for females. Also, the labour force participation rate for persons aged 35-44 years reached 56.0 percent; with 90.2 percent for males and 19.5 percent for females.

The distribution of labour force participation by region reveals the labour force participation rate in the West Bank reached 43.6 percent; with 73.1 percent for males and 13.8 percent for females. The results indicated that the labour force participation rate in Gaza Strip is much lower than in the West Bank. The rate in Gaza Strip reached 37.5 percent; with 64.4 percent for males and 10.6 percent for females.

3-2 Labour Force Status:

The labour force survey results indicated that the average of unemployment rate in the Palestinian Territory increased in 2000, reaching 14.1 percent. The rate in 1999 was 11.8 percent. The males unemployment rate reached 14.4 percent in 2000, against 11.6 percent in 1999. The corresponding figures for females 12.3 percent and 13.0 percent respectively.

Figure 1: Labour Force Participation Rate in the Palestinian Territory by Sex: 1995-2000

Figure 2: Labour Force Participation Rate in the Palestinian Territory by Age and Sex: 2000

Figure 3: Labour Force Participation Rate by Sex and Region: 2000

Full employment rate in the Palestinian Territory for 2000 is 80.9 percent; of which 80.1 percent for males and 85.2 percent for females. The full employment rate in 1999 was 82.8 percent; of which 82.6 percent for males and 83.9 percent for females.

The distribution of labour force participants by region and labour force status indicates that in the West Bank 81.7 percent of labour force participants are full employed, 6.2 percent underemployed, and 12.1 percent unemployed. The corresponding figures for Gaza Strip are 79.0 percent; 2.3 percent and 18.7 percent in 2000.

Unemployment rate for females in the West Bank reached 9.9 percent and for males was 12.5 percent in 2000. The corresponding figures for Gaza Strip are 18.4 percent and 18.7 percent in 2000 respectively.

3-3 Employment:

The survey results indicated that in 2000, employed persons were distributed according to place of work 56.0 percent working in the West Bank, 24.4 percent working in Gaza Strip, and 19.6 percent working in Israel and Israeli Settlements.

Results revealed that 29.9 percent of employed persons are working in services, while 17.5 percent are working in commerce, hotels and restaurants. The results indicated also that services are the main field of employment for females; about 45.9 percent of employed women work in services. Agriculture provides job opportunities to about 34.6 percent of females in the West Bank and Gaza Strip.

As well, persons are distributed by employment status: 4.6 percent are employers, 19.6 percent are self employed, 66.1 percent are wage employees, while 9.7 percent are unpaid family members.

About 21.1 percent of employed persons are engaged in elementary occupations, while 22.0 percent are engaged as craft and related trade workers. Also, 19.9 percent work as professionals, technicians and clerks, and about 11.3 percent work as skilled agriculture workers.

The results reveal that 23.7 percent of males are working in elementary occupations, while 6.5 percent of females are working in this field. 16.0 percent of males, and 41.2 percent of females work as professional and technicians.

The survey results indicated that the overall average of monthly work days is 23.2 days, 24.4 for employees working in the West Bank and, 24.5 for those working in Gaza Strip, and 20.2 days for those working in Israel and Israeli settlements. The overall average weekly work hours is 43.1, of which 43.6 hours for employees working in the West Bank, and 41.7 hours for those working in Gaza Strip, and 43.6 work hours for wage employees working in Israel and Israeli settlements.

The overall median daily net wage is 69.2 NIS; of which 61.5 NIS in the West Bank, 50.0 NIS in Gaza Strip, while the wage is 100.0 NIS for those working in Israel and Israeli Settlements.

The survey results revealed a clear discrepancy between the wage of males employees and female employees. The median daily wage for males employees in the West Bank is 66.3 NIS, and 50.0 NIS for females. The corresponding figures in Gaza Strip are 48.1 NIS for males and 51.9 NIS for females.

The results indicated the differences in amount of median daily wage according to industry. The median wage for those working in agriculture in the West Bank is 50.0 NIS, 30.0 NIS in Gaza Strip and about 80.0 NIS in Israel and Israeli settlements. The highest wage of employees working in the West Bank is for those working in construction 80.0 NIS, the highest wage of employees working in Gaza Strip is for those working in Services and Other Branches 53.8 NIS. While the highest wage for those working in Israel is working in Transportation, Storage, Communication and construction 115.4 NIS.

3-4 Unemployment:

The survey results revealed that the average unemployment rate in 2000 is 14.1 percent; 14.4 percent for males and 12.3 percent for females. Results revealed that unemployment to be wide spread among the youth. The unemployment rate for persons aged 15-24 years is 20.0 percent; of which 19.6 percent for males against 22.9 percent for females.

In addition, the unemployment rate in the West Bank reached 12.1 percent; 12.5 percent for males and 9.9 percent for females. The unemployment rate in Gaza Strip reached 18.7 percent; 18.7 percent for males, and 18.4 percent for females.

The highest unemployment rate by district was 22.4 percent in Deir Al-Balah, Khanyunis (20.4 percent), Rafah (19.2 percent), While unemployment rate in Gaza was 17.2 percent.

In the West Bank, the highest unemployment rate was found in Tulkarm and Qalqiliya (16.8 percent), Jenin and Tubas (16.2 percent), Nablus and Salfit (11.9 percent) then Jerusalem (11.5 percent), The lowest unemployment rate in Bethlehem and Jericho (8.9 percent).

The survey results indicated that 1.7 of the unemployed males and 0.3 percent of females had not completed one year of schooling. Conversely, about 75.9 percent of unemployed females and 13.0 percent of unemployed males have completed 13 or more years of schooling.

3-5 Persons Outside Labour Force:

The survey results indicated that about 58.5 percent of persons aged 15 years and over are not economically active, 29.9 percent for males and 87.3 percent for females. On the other hand, persons outside labour force are distributed accordingly 9.5 percent are old or ill, 53.7 percent are housekeeping, 26.8 percent are students, and 10.0 percent for other reasons.

The survey results indicated that 85.0 percent of persons who did not complete any year of schooling are outside labour force, 57.6 percent for those completed 1-6 years of schooling, and about 37.9 percent of those completed 13 or more years of schooling were outside labour force.

Chapter Four

Methodology

The methodology was designed according to the context of the survey, international standards, data processing requirements and comparability of outputs with other related surveys.

4-1 Questionnaire Design:

The questionnaire included four parts: one for recording necessary elements for survey management and controls, another part for identifying the sample households, one for recording the household roster and the demographic characteristics of household members, and one for recording labour force characteristics of working age household members.

4-2 Sampling Frame and Target Population:

Target Population:

All Palestinians aged 10 years and over living in the Palestinian Territory, excluding persons living in institutions such as prisons or shelters.

Sampling Frame:

The sampling frame consisted of a master sample of enumeration areas (EAs) selected from the population housing and establishment census 1997, the master sample consists of area units of relatively equal size (number of households) , these units have been used as primary sampling units (PSUs).

4-2-1 Sample Design:

The sample is a two-stage stratified cluster random sample.

Stratification:

Four levels of stratification were made:

1. Stratification by Governorates.
2. Stratification by type of locality which comprises:
(a) Urban (b) Rural (c) Refugee Camps
3. Stratification by classifying localities, excluding governorate centers, into three strata based on the ownership of households of durable goods within these localities.
4. Stratification by size of locality (number of households).

Sample Size:

The sample size in the 16th round consisted of 7,559 households, which amounts to a sample of around 29,650 persons aged 10 years and over (including 23,677 aged 15 years and over). In the 17th round the sample consisted of 7,559 households, which amounts to a sample of around 29,894 persons aged 10 years and over (including 23,890 aged 15 years and over), in the 18th round the sample consisted of 7,559 households, which amounts to a sample of around 29,709 persons aged 10 years and over (including 23,670 aged 15 years and over). In the 19th round the sample consisted of 7,559 households; of these only 7,349 households have been interviewed due to the Israeli comprehensive closure and aggression against the Palestinian people, which amounts to a sample of around 28,380 persons aged 10 years and over (including 22,495 aged 15 years and over).

The sample size allowed for non-response and related losses. In addition, the average number of households selected in each cell was 16.

4-2-2 Sample Rotation:

Each round of the Labor Force Survey covers all the 481 master sample areas. Basically, the areas remain fixed over time, but households in 50% of the EAs are replaced each round. The same household remains in the sample over 2 consecutive rounds, rests for the next two rounds and represented again in the sample for another and last two consecutive rounds before it is dropped from the sample. A 50 % overlap is then achieved between both consecutive rounds and between consecutive years (making the sample efficient for monitoring purposes).

In earlier applications of the LFS (rounds 1 to 11); the rotation pattern used was different; requiring a household to remain in the sample for six consecutive rounds, then dropped. The objective of such a pattern was to increase the overlap between consecutive rounds. The new rotation pattern was introduced to reduce the burden on the households resulting from visiting the same household for six consecutive times.

4-2-3 Estimations Procedure:

To estimate a given total Y for a given sub-population A , we introduce the following formula:

$$(1) \quad \hat{Y} = \frac{\hat{y}}{x} X$$

Where $\frac{\hat{y}}{x}$ is a ratio estimated from the sample and X is the total number of elements in the population related to the variable x in the denominator, usually X is taken from a recent census or from recent population projections.

The estimator for a given ratio for sub-population A is the following:

$$(2) \quad \hat{R}_A = \frac{\hat{Y}_A}{\hat{X}_A}$$

Where:

\hat{R}_A = The estimate for the ratio of two variables, Y/X , in sub-population A .

\hat{X}_A = The estimated total for variable X in sub-population A , given by formula (1)

\hat{Y}_A = The estimated total for variable Y in sub-population A , also given by formula (1)

Means and proportions are special types of ratios. In the case of the mean, the variable X , in the denominator of the ratio, is defined to equal 1 for each element so that the denominator is the sum of the weights in the sub-population.

In the case of proportions, the variable X in the denominator is also defined to equal 1 for all elements. But, in addition, the variable Y in the numerator is binomial and is defined to equal

either 0 or 1, depending on the absence or presence, respectively, of a specified attribute in the element observed.

4-2-4 Calculation of Variances:

It is very important to calculate standard errors for the main survey estimates so that the user can have an idea of their reliability or precision.

The variance calculation uses the method of ultimate clusters. Within any domain of estimation, for a sub-population A , and for a characteristic Y , the formulas are:

(a) The variance of an estimator of a total is estimated by:

$$(3) \quad V\left(\hat{Y}_A\right) = \sum_h \left[\frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{Y}_{Ahi} - \frac{\hat{Y}_{Ah}}{n_h} \right)^2 \right]$$

Where:

$$(4) \quad \hat{Y}_{Ahi} = \sum_{j \in A} W_{hij} Y_{hij}$$

and:

$$(5) \quad \hat{Y}_{Ah} = \sum_i \sum_{j \in A} W_{hij} Y_{hij}$$

The expression in (3) is an unbiased estimator of the Variance.

(b) The variance of an estimator of a ratio is estimated by:

$$(6) \quad \hat{Y}_{Ah} = \sum_i \sum_{j \in A} W_{hij} Y_{hij}$$

Where:

$$\text{COV} \left(\hat{X}_A, \hat{Y}_A \right) = \sum_h^{\text{Dom}} \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{X}_{Ahi} - \frac{\hat{X}_{Ah}}{n_h} \right) \left(\hat{Y}_{Ahi} - \frac{\hat{Y}_{Ah}}{n_h} \right)$$

And:

$\hat{V}(\hat{Y}_A)$ and $\hat{V}(\hat{X}_A)$ are calculated according to formula (3);

\hat{X}_A

\hat{X}_A is calculated according to formula (1) and \hat{R}_A according to formula (2).

4-3 Pilot Survey:

A pilot survey for the first round was conducted in May 1995 on the basis of about 90 households in the West Bank. It covered main types of households encountered in the full-fledged survey. Thus, it included households from urban areas, from Rural, and from refugee

camps, households engaged in self-employment activities, as well as in paid employment, households in the informal sector as well as the formal sector and educated respondents as well as illiterates.

On the basis of the results from the first round in September-October, 1995, the survey questionnaire and the fieldwork forms and procedures were reviewed and modified in order to assure the collection of accurate data.

4-4 Training and Recruitment:

The purpose of the training courses was to teach participants the main skills needed to conduct interviews. Two training courses were held, one in Ramallah for the West Bank trainees, and one in Gaza City for Gaza Strip trainees. Each course consisted of two parts: one on survey methodology including survey design, questionnaire design, interviewing techniques, and field operations; and one part on specifications of the labour force survey, including concepts and definitions, fieldwork procedures, data collection, editing, coding, tips for asking questions and recording answers, as well as field team organization and field supervision.

The training courses included lectures and field exercises. Each course lasted 3 days, training 11 interviewers and 4 supervisors.

4-5 Fieldwork:

The preparation phase for the LFS included recruiting and training of interviewers and supervisors. The staff on this project participated in previous survey projects at PCBS, and are highly qualified.

The West Bank was divided into three areas (North, Middle and South), each of which was supervised by one field supervisor. Each region consists of a number of districts, and the fieldwork was carried out by one fieldwork team, consisting of 2-3 interviewers.

Gaza Strip was also divided into three areas (North, Middle and South). Fieldwork activities were carried out by one fieldwork team, each consisting of a supervisor, an editor and 3 interviewers.

Special procedures were followed in order to ensure quality control and efficient organization of fieldwork. Such procedures are important for supervising work, as well as for receiving and delivering questionnaires, maps, sample lists in addition to other forms used for management and quality control.

Field operations were conducted in the Palestinian Territory from 09/01/2000 to 11/01/2001. Fieldwork teams were distributed to each area on the basis of the sample size. The number of LFS' fieldwork team was 18, including the fieldwork coordinator, 4 supervisors, 3 editors, and 10 interviewers including coders.

4-6 Data Processing:

The data processing stage consisted of the following operations:

1. Editing before data entry

All questionnaires were then edited in the main office using the same instructions adopted for editing in the field.

2. Coding

At this stage, the Economic Activity variable underwent coding according to West Bank and Gaza Strip Standard Commodities Classification, based on the United Nations ISIC-3. The Economic Activity for all employed and ever employed individuals was classified at the fourth-digit-level. The occupations were coded on the basis of the International Standard Occupational Classification of 1988 at the third-digit-level (ISCO-88).

3. Data Entry

In this stage data were entered into the computer, using a data entry template BLAISE. The data entry program was prepared in order to satisfy the following requirements:

- Duplication of the questionnaire on the computer screen.
- Logical and consistency checks of data entered.
- Possibility for internal editing of questionnaire answers.
- Maintaining a minimum of errors in digital data entry and fieldwork.
- User- friendly handling.

Note: The sample weights were revised according to the most recent population estimates, population age-sex structure and place of residence. New sample weights have been calculated.

Chapter Five

Data Quality

Since the data reported here are based on a sample survey and not on a complete enumeration, they are subjected to sampling errors as well as non-sampling errors.

Sampling errors are random outcomes of the sample design, and are, therefore, in principle measurable by the statistical concept of standard error. A description of the estimated standard errors and the effects of the sample design on sampling errors are provided in the previous chapter.

Non-sampling errors can occur at the various stages of survey implementation whether in data collection or in data processing. They are generally difficult to be evaluated statistically. They cover a wide range of errors, including errors resulting from non-response, sampling frame coverage, coding and classification, data processing, and survey response (both respondent and interviewer-related). The use of effective training and supervision and the careful design of questions have direct bearing on limiting the magnitude of non-sampling errors, and hence enhancing the quality of the resulting data. The following are possible sources of non-sampling errors:

- Errors due to non-response because households were away from home or refused to participate. The overall non response rate amounted to almost 10.5% which is relatively low; a much higher rates is rather common in an international perspective. The refusal rate was only 0.4%. It is difficult however to assess the amount of bias resulting from non response. The PCBS has not yet undertaken any non-response study. Such a study may indicate, that non-response is more frequent in some population groups than in others. This is rather normal and such information is necessary to be able to compensate for bias resulting from non-response errors.
- Households interviewed in a week different than the reference week. All households were interviewed in the reference week in this survey.
- Errors in data processing, such as coding and punching. The data underwent checking and completion of missing information in the office and logical checks were computerized as well as manually, including call-backs if needed.
- Response errors which resulted from misunderstanding of the questions, interviewers' bias in asking the questions and in probing. Thorough training, supervision, and various quality control checks were used to minimize bias resulting from these kinds of errors.

The demographic data, including the sex ratio by age were computed and found generally reasonable and consistent with those found from other sources. These results and the various checks for external validity indicate that the survey data are of a high quality.
